Highlights & Accomplishments

October 2022
- Discarded stories porting Goland ARM64 and AMD64 to Native Assembly
- Ported BN256, Optate.go, twist.go, and BN256_test.go to C++
- Troubleshoot of BigInt, other testing issues for the GoLang to C++ conversion
- Increased BN256 Performance Statistics
- Pulled out boost libs used by bn256
- Added new stories to improve GoLang performance, approved by ENF Engineers

November 2022
- Final deliverables in ENF queue for peer review
- Continued updates to Initial benchmarking
- Refactored Cmake for all platforms and compilers
- Hand-rolled BigInt instead of Boost

Key Milestones

Description	Planned	Act/*Est
Group & Implement GFP files (Port Golang to C++)	08 SEP 2022	08 SEP 2022

Run two tests: Example_test &main-test in new env.	30 SEP 2022	18 OCT 2022
Create and Continued Updates to Initial Benchmarking	07 OCT 2022	09 NOV 2022
Update benchmarking of new code vs. Go Library	15 OCT 2022	14 OCT 2022
Increase BN256 Perf. Statistics, Pull out boost libs used by bn256, Troubleshoot BigInt/Testing Issues for GoLang to C++ Converter	28 OCT 2022	27 OCT 2022
Use OCI's hand-rolled BigInt instead of Boost, Refactoring Cmake for all platforms & compilers	28 OCT 2022	09 NOV 2022
Replace the implementation of bn256 host functions to use the new bn256 library, Code Handoff to ENF	04 NOV 2022	*TBD

Upcoming Activities / In Progress

- In Peer Review:
  - Replace bn256 implementation host functions, use the new bn256 library
- Meeting for OCI to hand code to S. Diesel, L. Huang at ENF

Issues / Risks / Escalations

- Testing issues will push out the project into October - *accepted*
- Additional scope of work to delay code hand off to 04 NOV 2022 - *accepted*
- OCI waiting on ENF final peer review to schedule code hand-off - *blocker*

Highlights & Accomplishments

November 2022
- Stage 2 Product Proposal approved and posted.
- Create initial high-level architectural view of Performance Harness at Stage 2
- Add target tps to log directory name for performance _test_basic
- Make number of chain threads configurable and report on the number configured
- Make number of producer thread configurable and report on the number configured
- Update cluster.py for running producer node to heap mode vs. mapped
- Remove–resource-monitor-not-shutdown-on-threshold-exceeded option
- Fix trx gen err detections

December 2022
- Perf. test to establish thread count recommendations (net, chain, producer)
- SPIKE: Investigate potential default arguments not showing in config reporting
- Update Node.py response order and truncate printed verbose output for CI/CD

Key Milestones

Description	Planned	Act/*Est

Performance Harness Stage 2 - *TBC*	30 MAR 2023	*30 MAR 2023

Upcoming Activities / In Progress

- In Peer Review:
  - Create baseline evaluation of Mandel 3.1 using Performance Test Harness
  - Create baseline evaluation if Leap 3.1 vs. 3.2 using Perf. Test Harness
  - Performance Harness MVP: Address ENF Peer Review
- Baseline eval of EOS 2.0 & 2.1 using Performance Test Harness
- Update Perf Harness to work with 2.0 and 2.1 release
- S. Diesel to arrange meeting with OCI to discuss Stage 2 deliverables

Highlights & Accomplishments

November 2022
- Migrate launcher:
  - port data structures and data generation code
  - port network topology generator
  - port command line arguments
  - port remote nodeos launcher
- Capture test network topology in graphwiz format

December 2022
- Remove usage of curl, substituting urllib.request

Highlights & Accomplishments

November 2022
- LEAP 4.0 stories for bug fixes, enhancements, other requests
- EVM RPC branch tested
- EVM block conversion WrongNance error if transaction has multiple push trx actions
- Measured EVM latency for 0.5 vs. 1 second blocks
- Repair TrustEVM-node stop processing when syncloop stops
- OpenSSL Refactor cleos to use libcurl for HTTP/S
- Reconnect TrustEVM-node to SHiP and continue from last block received
- TrustEVM-node clean shutdown

December 2022
- Trust EVM: Unable to run when rpc_plugin is specifice
- PRs for 3.2.0-rc1 and 3.1.2 releases
- Leap 4.0: Several stories and PRs for enhanced functionality

Highlights & Accomplishments

November 2022
- Gas fee Reserved Address Ranges completed
- Complete Meta mask integration
- Create test to generate forks for silkworm-rpc node
- Repair silkworm-rpc node issues identified
- Metamask integration, prepared for testing
- Testing TrustEVM RPC interface against a block explorer
- Dust handling paper complete and put up
- Final decision concluded on Silkworm maturity and stability

December 2022
- Gas usage discrepancy on transactions executed by runtime vs. trustevm-rpc
- Variable Simulation Model created
- Set up sandbox environment with different chainID, sub-domain and SSL certificate
- EOSIO.token compatibility completed

Highlights & Accomplishments

October 2022
- Closed beta for API server scheduled
- Complete proof API server v1

November 2022
- Milestone #1 ENF audit complete by B. Kittinger
- IBC proof server has been open-sourced and being tested by multiple teams
- Naming convention proposal presented to the coalition
- Coalition meeting to discuss IBC governance
- Completed additional work requested by Coalition prior to external auditing
- External audit has commenced in advance of Milestone #3
- Completed first version of eosio.ibc contract
- Deployed eosio.ibc to UX public testnet
- Milestone #4 (Firehose + proof API server bundle) submitted for final approval
